KEY PROJECTS

Speech2Text Application in AWS Cloud Infrastructure | 2022-23

- Built a ML Pipeline comprising Open Source models converting Call Center audio transcripts to usable insights in dashboard.
 - Deployed deep learning models - PyAnnote (for Speaker Diarization) and OpenAI's Whisper (for Speech2Text) - via docker containers.
 - Partnered with DevOps Engineer to scale the dockerized ML portion using AWS EKS. Scaled the rest of the solution using AWS Serverless components
-

Serverless LLM-powered Classification Application | 2023

- Leveraged OpenAI paid models (such as GPT 3.5Turbo and GPT-4) to perform hierarchical text classification
 - Utilised AWS Lambda functions to throttle the OpenAI API calls at scale
-

BERT Fine-tuned Aspect-based Sentiment Analysis Pipeline | 2020-21

[More Details](#)

- Built a Sequence Classification ML Pipeline which converts customer comments into trackable Aspect and Sentiment pairs
 - The ML Pipeline used BERT-fine-tuning and it helped yeilding 85%+ F1 score with minimal annotated data for more than 25+ classes
 - Incorporated easy to use human-in-the-loop annotation and model monitoring scripts
-

Personally Identifiable Information (PII) Detection using Named Entity Recognition (NER) | 2020-21

[More Details](#)

- Anonymized PII in text data by building a NER system using **RoBERTa Fine-tuned Transformer model**
 - Bootstrapped the training data using Spacy rules (thus easing the annotation process by not starting labeling from scratch)
-

NLP Semantic Search Pipeline | 2021-22

[More Details](#)

- Purpose: Predict the prominent issues about to occur in a downstream data source by reviewing the issues much earlier in the automotive launch cycle
 - Created a "digital thread" - a NLP-based semantic similarity matching engine based on automotive part descriptions - between two automotive domain specific data sources
-
